From Caterpillar to Butterfly
Caterpillars

- Little long, tube like insects
- They have three pairs of true legs
- They eat a lot of food
- They are rich in proteins
Cocoon

- Cocoons are a defense for caterpillars that are changing.
- They hide under leaves and branches.
Butterfly

- After coming out of a cocoon, the caterpillar turns into a Butterfly.
- It has wings and antennas.
- It travels a lot faster than when it was a caterpillar.
